

# How Oscorm's Global Delivery Model Services

## Meta Description:

Oscorm's Global Delivery Model Services use a three-tier structure to deliver IT projects faster, cheaper, and with zero quality compromise.

More than three-quarters of IT initiatives fail due to the failure to coordinate activities among various time zones. That number is reduced significantly after teams utilize a multi-shore delivery approach that is systematic. In its response to this demand, get [Oscorm's Global Delivery Model Services](#). Whether the project is being implemented in Hyderabad, Warsaw or Toronto, the model will ensure that the project would be minimised in costs, delay reduction and similar quality all the way.

**OUR GLOBAL DELIVERY MODEL**

LOCAL COMMITMENT.

ONE PARTNER.  
ENDLESS POSSIBILITIES.

**OSCORM**  
YOUR OUTSOURCING PARTNER

Delivering Excellence  
Across the Globe.

## What Makes Oscorm's Delivery Model Different from Standard Outsourcing?

The waiting period in most outsourcing becomes the norm. The **Oscorm's Global Delivery Model Services** is unique in the services offered. The three pillars on which every project is based are onshore planning, nearshore coordination and offshore implementation.

No sprinting, rather a relay with clear exchanges. Each side of the lines is concerned with its forte.

Two product launches failed and this was the approach that a UK fintech company adopted. The proportion of their sprint completions rose to 89% in just one quarter amidst earlier 61%. The framework of distribution across sites rather than the personnel changed.

## How Does Oscorm Handle Time Zone Gaps Without Losing Momentum?

The process of follow-the-sun is taken care of in the **Oscorm's Global Delivery Model Services**. We do not ever quit. When one closes, then the next comes in right where the previous one closed.

At the end of the day each group has handed off a well-organised handoff paper. Make no assumptions. There will not be slack messages after midnight. Simple, uncluttered transitions.

A mid-size eCommerce firm tried this after facing problems when there was a 14 hour time difference between their product team in the US and their team in Asia which operated in development. Oscorm reduced the time that they took to resolve the problem by 34-percent, after 8 weeks of employing the handoff procedure by Oscorm.

## Why Do Businesses Choose Oscorm's Model for Cost Optimization?

At onshore, senior people make crucial decisions, whereas offshore, high-volume and routine operations are relocated to a location with 40-60 percent lower costs, as stipulated in the **Oscorm's Global Delivery Model Services**.

A logistics SaaS start-up had the ability to restructure their data processing and quality assurance workload through the offshore centres of Oscorm without shrinking their core engineering team onshore, thus saving them an excess of 400,000 every year.

## What Quality Controls Are Built Into the Delivery Model?

Without a strong set of checkpoints in a distributed model, then it cannot be very good. Instead of waiting till the end of it all, the Oscorm's Global Delivery Model Services accomplishes quality gates at each period of transition between phases.

Test reviews, compliance testing, code reviews, and other tasks will be done there in Scrum. Agent has to give approval on the next step.

Repeat failure of the software updates of a single healthcare IT customer was not able to address HIPAA regulations. After using the gate-based review system by Oscorm, zero compliance issues were achieved in six subsequent releases.

## FAQs

### **What do we deliver at Oscorm Global?**

Outline of how IT projects will be organised to be delivered in multiple locations.

### **Of all the services offered by Oscorm in its model of delivery models, who benefits the most?**
